PROFIL

Senior Software Engineer with 12 years of experience building large-scale, security-critical production systems across the full stack (Java / React / TypeScript / Ops). Track record delivering performant, maintainable software under strict compliance and volume constraints — from greenfield architecture to cloud migration at scale. Strong believer in test-driven development, clean APIs, and software that end users can trust. Active Octonous tester and Firefox user for 20+ years.

SKILLS

Backend: Java 8-21, Spring Boot, Spring Batch

Frontend: React 18, TypeScript, JavaScript

DevOps / Cloud : Kubernetes, Jenkins, GitHub Actions, AWS

Data: PostgreSQL, Databricks, Oracle, Teradata

Methodology: TDD, BDD, Agile

AI Code Assistants : Github Copilot,

Anthropic Claude Code

EDUCATION

Information Technology Expert

EPITECH 2008 - 2014

IT Engineer

Universidad de Huelva (ESP) 2012 - 2013

PROFESSIONAL EXPERIENCE

Software Engineer - Société Générale

Société Générale; 2017 - present

- Joined as consultant developer in 2017, became internal employee in 2020.

Worked across three major programs on Basel/RWA risk systems processing tens of millions of records across tables with 200+ columns.

- **SAFIR program (2017-2023)**

Core application for Basel adjustments and RWA production, used by international teams across France, USA, Romania and others. Worked in cross-functional teams of 10-12 engineers split between Paris and Bangalore.

- Developed Java 8 web service for RWA calculations on equities using TDD/BDD
- Built Risk Weight computation service for factoring asset tranches under high-volume constraints
- Delivered RWA calculators, tranching services, and reference data loaders

- **Certification Factory (2023-2024)**

Full cloud redesign of SAFIR (React, TypeScript, PostgreSQL, Databricks, AWS).

- Migrated the full web application layer — complete rewrite from legacy stack
- Consolidated 200+ batch processes into 4 modular services
- Cut deployment time from 1 day to 2-3 hours

- **Nova (2025-present)**

Rating interface for Société Générale employees to assess financial and climate risk exposure across millions of companies.

- Built with Java 21 / Spring Boot 3, React 18, deployed via Jenkins and Kubernetes
- Migrated Spring Boot 2.8 → 3.4 leveraging GitHub Copilot for accelerated refactoring
- CI/CD cadence: daily dev deploys, multiple staging deploys per week

Java Developer/ Loan IQ at BNP

BNP Paribas CIB, 2014 - 2017

- Migrated Loan IQ v6 → v7 across the full application with zero regressions or incidents, serving hundreds of users on a dataset of millions of records
- Introduced CI/CD toolchain: Jenkins, Maven, Nexus, Sonar
- Built loan migration tool (Uniloan → Loan IQ) within a team of 8 engineers (Paris + Mumbai) — migrated millions of loans representing billions in financial exposure using Spring Batch, TestNG, Ehcache

Lead Developer at 42Consulting

2011 - 2014

- Led a 3-developer team to build NERD, an internal platform centralizing company-wide business information (Zend Framework, Doctrine).
- Wrote functional and technical specs, oversaw QA and production releases.
- Designed and delivered an SQL training program for company consultants.
