

VIVIEN CHAVEE

Senior Software Engineer – Banking & Risk

+33695566804

chaveev@gmail.com

PROFIL

Senior Software Engineer with 12 years of experience in the banking sector, specializing in credit risk management. Dedicated and committed, I design and develop large-scale projects that combine full-stack expertise (Java/React) with measurable business impact to deliver scalable and secure solutions.

EDUCATION

Information Technology Expert

EPITECH 2008 – 2014

IT Engineer

Universidad de Huelva (ESP) 2012 – 2013

Baccalauréat Général

Lycée André Boulloche 2008

SKILLS

Backend: Java 8-21, Spring Boot, Spring Batch
Frontend: React 18, TypeScript, JavaScript
DevOps / Cloud : Kubernetes, Jenkins, GitHub Actions, AWS
Data: PostgreSQL, Databricks, Oracle, Teradata
Methodology: TDD, BDD, Agile

PROFESSIONAL EXPERIENCE

Software Engineer at Société Générale

Société Générale; 2017 – now

I joined Société Générale in 2017 as a consultant developer and became an internal employee in 2020. I worked within the SAFIR program (Paris-Bangalore), the core application dedicated to Basel adjustments and RWA production.

I developed, using TDD/BDD, a Java 8 web service for RWA calculations on equities, then contributed to a project computing Risk Weights for factoring asset tranches under strong performance and volume constraints.

I also took part in the continuous improvement of SAFIR: updates to the adjustment interface, development of Java applications (RWA calculators, tranching services, reference data loaders), as well as SQL and shell scripts.

In 2023, I joined the Certification Factory program, a cloud redesign of SAFIR (React, TypeScript, PostgreSQL, Databricks, AWS).

In 2025, I joined the Nova team, building a rating interface for clients exposed to financial and climate risks using Java 21 / Spring Boot 4 and React 18, with deployments through Jenkins and Kubernetes.

Java Developer/ Loan IQ at BNP

BNP Paribas CIB, 2014 – 2017

During my assignment, I handled the migration from Loan IQ version 6 to version 7 with no regression or incidents, implementing automation tools such as Jenkins, CI with Maven, Nexus, and Sonar.

Second project: migration of loans from Uniloan to LoanIQ; development of a migration tool within a 6-developer team (Spring Batch, TestNG, Ehcache).

Lead Developer at 42Consulting

2011 – 2014

I served as the lead Zend developer at 42Consulting on a web project called NERD, an internal platform designed to centralize all the company's business information.

I supervised a team of three developers and managed project planning and tracking using agile methods.

I wrote both functional and technical specifications, then developed part of the application with Zend Framework and Doctrine.

After development, I oversaw QA testing, user acceptance testing, and production releases.

I also designed and led an SQL training program for 42Consulting consultants.
